Facility Safety Checklist

- Access Control
- Locks and Deterrents for Windows and Doors
- Building Design and Infrastructure
- Exterior and Interior Vulnerabilities
- Security Systems
- Physical Premises Vulnerability Assessment
- Physical Barriers
- Exterior Lighting
- Visual Obstacles to Cameras
- Security Technology
- Reactive and Proactive Security Response
- Comprehensive List of threats, both probable and improbable
- Identify Potential Threat Actors
- Create a Security Strategy
- Safety Protocols
- Safety Training for employees
- Evacuation Plans
- Security Compliance

While it may seem like a daunting task, a thorough risk assessment and the development and implementation of a comprehensive security plan is critical to keeping your employees safe.

Unfortunately, a threat actor only needs to find one entry point, one weak link. In the case of an active shooter, seconds count. Current security systems are reactive; alarms go off only after the perpetrator breaks in. They often depend on desperate 911 calls from victims to alert authorities. It is far better to be proactive and identify a potential threat before shots are fired, to lock down the premises, and give law enforcement the critical intelligence they need to neutralize the threat as quickly as possible.

Take the time to ask yourself critical questions in order to determine what you need to safeguard the lives of your people.

As former Navy SEALs, we have dedicated our lives to using our hands-on combat experience to give you and your security personnel the military-level technology you need to win the war against violence in schools and the workplace.

Our gun-detection video analytics technology layers onto your existing security camera network, alerting authorities and administrators within 3 seconds of detecting a gun. ZeroEyes provides real-time tracking of threat actors, giving police and security the combat-level intel they need to quickly find and neutralize their target, keeping everyone safe.
